---

Dear Senator [Last Name],

Have you ever wondered who actually uses natural kratom products - and what they stand to lose? I never thought I would write to a legislator, but as a North Carolina constituent and someone in long-term recovery, I could not stay quiet about this one.

Recovery is not a straight line, and finding tools that support a steadier, more grounded daily life matters more than most people realize from the outside. Natural kratom has been part of how I support a calmer mindset and steady energy through the kind of days that used to feel impossible. That is not a small thing. For people walking the road I am on, consistency and stability are everything.

I want to share something that puts the real-world impact into sharper focus: a blanket ban does not just remove a product from a shelf. It removes a choice from a real person who has worked hard to build a stable life. Pushing people away from a botanical supplement they trust does not make the problem go away - it just makes their options narrower and less safe.

The primary issue causing problems today is synthetic 7-OH, and that is why this conversation keeps getting so distorted. If you examine a kratom leaf growing naturally on a tree, you will not find 7-OH sitting in that leaf the way these synthetic products present it. Synthetic 7-hydroxymitragynine, concentrated into tablets and gas station candies, is a completely different product - and it is the one worth targeting.

Natural kratom products used by responsible adults should not be swept into the same category as lab-produced synthetic compounds. That distinction matters, and HB 328's current language appears to erase it entirely.

Smart policy can protect consumers without punishing them. A Kratom Consumer Protection Act framework would set quality standards, remove dangerous synthetic products from shelves, and keep access open for adults who use natural kratom responsibly.

I respectfully encourage you to adopt a consumer-protection framework rather than a ban. That would allow the state to impose standards, remove dangerous products, and still preserve access to natural kratom for adults who use it responsibly.

Sincerely,

Seymour Butts

[Your City, North Carolina]

## KCAC Advocacy Buddy — North Carolina

Advocate: Sal Monella | Generated: 6/30/2026

---

Dear Senator [Last Name],

Natural kratom products have become a quiet, consistent part of how I manage my daily routine. As a homeowner and local taxpayer in my community, I want to offer a straightforward account of what this bill would mean for someone like me.

My use of this botanical supplement has been deliberate and personal. It supports steady energy and focus, and has helped me feel more settled during demanding stretches of everyday life. Nothing about that experience resembles recklessness or misuse. It resembles a person making a considered choice about their own wellness.

The scientific evidence here matters, and it points clearly in one direction: what belongs under scrutiny is not natural kratom products broadly, but the synthetic alkaloids that have flooded the market through gas stations and convenience stores. Synthetic 7-OH is lab-produced, artificially concentrated, and bears little meaningful resemblance to traditional botanical use. Treating these as the same category is not precision - it is an error with real consequences for people who have done nothing wrong.

At this moment, about 24 million Americans are using natural kratom leaf in everyday life without widespread safety problems. When so many normal adults are using a product responsibly, that reality should matter more than panic or confusion driven by unrelated synthetic products.

What I am asking for is not absence of regulation. Reasonable standards - age verification, accurate labeling, purity testing, and clear restrictions on synthetic additives - would address genuine public health concerns without stripping adults of a botanical supplement they rely on. A framework built around consumer protection makes far more sense than a blanket prohibition.

Please do not mistake prohibition for precision. If the goal is to address dangerous products, then synthetic 7-OH should be the focus, while natural kratom leaf should remain available to adults under a well-structured consumer protection framework.

Respectfully,

Sal Monella

[Your City, State]

## KCAC Advocacy Buddy — North Carolina

Advocate: Phil McCracken | Generated: 6/30/2026

---

Dear Senator [Last Name],

My name is Phil McCracken, and I am a healthcare professional writing to you as a constituent from Colorado who values public safety and also values proportionate policy. That background shapes how I read HB 328, and it is precisely why I am troubled by the bill's language scheduling natural kratom alongside substances it does not meaningfully resemble.

The case against a blanket ban is not simply personal preference. It is a question of accuracy. Natural botanical products with documented traditional use deserve to be evaluated on their actual risk profile, not grouped into a scheduling category because of surface-level association with more dangerous compounds. A ban on natural kratom leaf does not remove the problem from the market. It removes a lawful option from responsible adults while leaving the actual concern untouched.

If there is one takeaway I hope you walk away with, it is this: the product driving legitimate public health concern is not the same as the traditional botanical supplement many adults, including healthcare professionals, use and rely on. Too many people are using the word "kratom" to describe products that are no longer really comparable to the traditional leaf. That is how natural kratom ends up taking the blame for concerns tied more directly to potent synthetic 7-OH products. Synthetic 7-hydroxymitragynine, lab-produced and found in tablets and gas station candies, is a categorically different substance. Treating them as equivalent is both scientifically imprecise and legislatively counterproductive.

What North Carolina needs is not prohibition. Targeted consumer protection standards - mandatory testing, honest labeling, and enforceable age restrictions - would address the actual risk without stripping availability from adults who use natural kratom products responsibly. Kratom Consumer Protection Act-style regulation offers exactly that framework.

Please do not criminalize ordinary adults over a problem tied to concentrated synthetic 7-OH. A stronger answer would be consumer protection: require testing, accurate labeling, and age limits, and preserve access to natural kratom leaf under clear regulatory standards.

Respectfully,  
Phil McCracken  
Colorado

## KCAC Advocacy Buddy — North Carolina

Advocate: Mike Rotch | Generated: 6/30/2026

---

Dear Senator [Last Name],

Thank you for your continued service to the people of North Carolina. It takes real commitment to show up for your constituents, and I want you to know that this letter comes from that same place - a genuine desire to get policy right.

My name is Mike Rotch, and I am writing to you as a caregiver and a North Carolina constituent who follows this kind of legislation closely. I want to make sure my voice is included in this process, because HB 328 would directly affect people like me who rely on natural kratom products as part of a responsible daily routine. Caregiving is demanding work. It asks a lot, quietly and constantly. Natural kratom has supported steady energy and a calmer mindset on days when both feel hard to come by. That matters. A ban would take that away without offering any alternative path forward.

One fact that should be central to this debate, but often is not, is the difference between what grows in nature and what gets manufactured in a lab. Natural kratom products, made from plain leaf, are not the same thing as synthetic 7-hydroxymitragynine. Concentrated synthetic 7-OH is the product showing up in gas stations and convenience store candy, processed in ways that have nothing to do with traditional botanical use. Treating both as identical under the law ignores science and punishes the wrong people.

What makes this especially frustrating is that responsible consumers end up paying the price for market behavior they did not create. The better answer would be to rein in synthetic 7-OH while leaving plain leaf users alone.

Other states have found a smarter path by adopting Kratom Consumer Protection Act frameworks, setting age limits, labeling requirements, and quality standards that address real risks without eliminating access for adults who use these products responsibly.

A ban may sound simple, but simple policy is not always good policy. The better course is to regulate the industry, stop unsafe synthetic products, and leave room for adults to continue accessing natural kratom under clear safeguards.

Respectfully,

Mike Rotch

[Your City, North Carolina]

## KCAC Advocacy Buddy — North Carolina

Advocate: Dixie Normous | Generated: 6/30/2026

---

Dear Senator [Last Name],

HB 328, as currently written, would schedule natural kratom in a way that treats it identically to dangerous synthetic compounds, and I find that distinction worth contesting directly. As a researcher and scientist, I am writing to ask you to distinguish between what is truly risky and what responsible adults use safely as a botanical supplement.

My work requires precision, sustained attention, and consistent daily function. Natural kratom products have supported steady energy and focus in ways that fit appropriately into a disciplined, health-conscious routine. The stability I have maintained as a professional and a member of my community reflects, in part, the responsible choices I make about what I consume.

Losing access to natural kratom products would not simply be an inconvenience. It would remove a botanical supplement that responsible consumers rely on, while doing nothing to address the products that genuinely warrant regulatory concern. Responsible adults would be penalized, not protected.

What gives me confidence that a better path exists is the growing legislative recognition that the real problem lies elsewhere. A lot of the damage in public discussion comes from collapsing unlike things into one category. Natural kratom leaf, with its balanced alkaloid profile and history of use, should not be merged with modern synthetic 7-OH products designed for stronger effects. Synthetic 7-hydroxymitragynine, manufactured in laboratories and sold in tablets and gas station products, poses risks that bear no reasonable comparison to natural kratom products derived from traditional botanical sources.

North Carolina has an opportunity to lead with precision rather than prohibition. Kratom Consumer Protection Act-style regulation would establish enforceable standards covering labeling, age

restrictions, and product testing. Such an approach targets bad actors without stripping responsible consumers of their right to choose a natural botanical product. The best policy protects constituents through targeted enforcement, not broad restrictions that sweep in responsible use alongside genuine harm.

A blanket ban is too blunt an instrument for a market problem this specific. The better option is to regulate what is dangerous, especially concentrated synthetic 7-OH, and leave natural kratom available under clear and enforceable rules.

Respectfully,  
Dixie Normous  
California

## KCAC Advocacy Buddy — North Carolina

Advocate: Holden McGroin | Generated: 6/30/2026

---

Dear Senator [Last Name],

Safety matters to me. As a faith leader and constituent, I write today as someone who would be directly affected by how this legislation is finalized, and I want to be clear: responsible oversight of botanical supplements is something I genuinely support. What I oppose is a blanket prohibition that treats natural kratom products as equivalent to the lab-produced synthetic compounds that are actually driving public concern.

My personal story answers were not fully detailed in my submission, but the core truth is straightforward. Natural kratom has supported my daily steadiness and overall sense of wellbeing in meaningful ways. The prospect of losing that availability under HB 328 is not abstract to me. It is a real and troubling consequence of legislation that, with respect, appears to conflate two very different things.

I believe the key issue that gets lost in this debate is the distinction between what grows from the earth and what gets engineered in a lab. Products containing 7-OH rely on a highly concentrated synthetic alkaloid that is dramatically stronger than anything naturally occurring in natural kratom leaf. If lawmakers truly want to address the source of the problem, that is where they should focus.

The scheduling language in HB 328 sweeps natural kratom products into the same category as synthetic 7-hydroxymitragynine, and that is where the bill loses me. A framework modeled on Kratom Consumer Protection Act principles, covering things like age restrictions, purity standards, and accurate labeling, would give North Carolina real tools to protect consumers. Prohibition hands those consumers nothing except fewer options and less transparency.

Thank you for your time and for the work you do on behalf of constituents across this state. The ask here is not to ignore risk. It is simply to direct the response toward the actual source of it.

I respectfully ask that you separate the traditional leaf from the synthetic products now distorting the market. Natural kratom should be regulated with common-sense safeguards, while concentrated synthetic 7-OH should be addressed directly and aggressively.

Holden McGroin  
California

## KCAC Advocacy Buddy — North Carolina

Advocate: Ben Dover | Generated: 6/30/2026

---

Dear Senator [Last Name],

Good lawmaking follows evidence. That principle guides my work as an educator and academic, and it is exactly why I write as a California voter who believes effective lawmaking should be targeted, factual, and fair. HB 328, as currently written, does not meet that standard.

My concern begins with the bill's apparent failure to distinguish between very different products. It is reasonable for the legislature to be troubled by synthetic compounds showing up in gas stations and convenience stores. Those products deserve scrutiny. What is harder to justify is treating natural kratom products the same way, when the evidence for doing so simply is not there. As a researcher by training, I notice when a policy lumps unlike things together. This bill does exactly that.

My own experience with natural kratom products has been straightforward and unremarkable in the best sense. No drama, no escalation. It has supported steady energy and focus and helped me feel more settled during demanding stretches of work. Nothing about that experience resembles what public health officials rightly flag when they warn about synthetic compounds.

Beyond my own personal experience, the distinction here is not subtle. Natural kratom leaf is an organic plant with a real history of human use, while synthetic 7-OH is made in a lab and comes with chemical byproducts that people have never historically consumed. That is a major difference, and it makes no sense to regulate a traditional leaf the exact same way as a manufactured synthetic compound.

The better path is a regulatory framework modeled on the Kratom Consumer Protection Act. Require clear labeling, mandate age verification, set enforceable limits on synthetic 7-hydroxymitragynine, and hold retailers accountable. That approach protects constituents from genuinely risky products without stripping responsible adults of access to a botanical supplement they have chosen

deliberately.

I respectfully ask that you avoid a one-size-fits-all response. Consumer protection standards and synthetic 7-OH limits would provide a more honest and effective solution than banning natural kratom leaf altogether.

Respectfully,

Ben Dover

California

## KCAC Advocacy Buddy — Delaware

Advocate: Anita Bath | Generated: 6/30/2026

---

Dear Representative [Last Name],

As a veteran and a consumer of natural kratom products, I am writing to express my support for HB 332 and to ask you to champion it as a meaningful step toward science-based consumer protection in Delaware.

There is a real and urgent need for thoughtful regulation in this space. Natural kratom products have become part of the wellness routines of many responsible adults across this country, including veterans who are looking for options that support everyday comfort and a calmer mindset. Without a clear regulatory framework, consumers have little assurance about product quality, labeling accuracy, or age restrictions. HB 332 addresses exactly these concerns. A structured approach with enforceable standards protects everyone, including those of us who use natural kratom products carefully and consistently.

There is a critical distinction that this legislation should carry forward clearly: Delaware policy must draw a firm line between natural products and high-risk synthetic compounds such as concentrated 7-OH. A natural kratom leaf contains its compounds in balance. Acknowledging that isolating or synthetically emphasizing a compound like 7-OH creates a completely different product is the foundation of good science-based policy. Synthetic 7-hydroxymitragynine, found in tablets and gas station products, poses risks that simply cannot be compared to traditional natural kratom products. Treating them identically in law would be both scientifically inaccurate and harmful to responsible consumers.

Other states have shown that regulation, rather than restriction, is the more effective path. Age limits, labeling requirements, and safety standards give the public real protections without removing access for adults who rely on these botanical supplements.

Please pass a law that focuses enforcement where the actual risks lie. Responsible consumers should not be swept into the same category as the bad actors introducing synthetic compounds into the marketplace. Your vote for HB 332 can set a standard worth following.

I urge you to pass this wise law that protects the public while recognizing the difference between natural kratom leaf and synthetic 7-OH products.

Respectfully,

Anita Bath

California

Advocate: Gail Force | Generated: 6/30/2026

---

Dear Senator [Last Name],

Your commitment to public service deserves genuine respect, and it is because of that respect that I am writing to ask you to take a second look at HB 328. As a registered voter and taxpayer in North Carolina, I have a personal stake in how this legislation is written - and as a union member and labor representative, I understand what it means when policy decisions affect real people's everyday lives without their input.

The legislature's concern about synthetic alkaloids and unregulated products is legitimate. Nobody disputes that. But HB 328, as written, sweeps natural kratom products into the same category as lab-produced synthetics, and that distinction matters enormously.

When I look at this bill through the lens of someone it would actually affect, the problem becomes clear. Natural kratom has supported my steady energy, everyday comfort, and overall sense of balance. Broad scheduling language would eliminate that availability entirely, treating responsible consumers like a problem to be solved rather than constituents worth protecting.

The science supports drawing a sharper line. Natural kratom products contain trace alkaloids in their naturally occurring ratios. Concentrated synthetic 7-OH, the product turning up in gas station gummies and tablets, is a lab-manufactured compound produced in quantities that have no parallel in traditional botanical use. These are not the same thing, and policy should not treat them as such. When HHS and the FDA held a press conference about synthetic 7-OH last year, they did not attack natural kratom leaf. In fact, they supported natural kratom enough to bring in kratom advocate Melody Wolf to talk about the benefits of traditional kratom.

A Kratom Consumer Protection Act framework offers the precise tool this situation calls for: age restrictions, accurate labeling, prohibition on synthetic 7-hydroxymitragynine, and clear quality

standards. That is targeted enforcement. That is the kind of policy a labor representative can stand behind.

I ask that you consider the millions of Americans who use natural kratom responsibly. Public policy should target harmful synthetic formulations without unnecessarily restricting access to a traditional botanical product.

Respectfully,

Gail Force

[Your City], North Carolina

## KCAC Advocacy Buddy — North Carolina

Advocate: Ivana Humpalot | Generated: 6/30/2026

---

Dear Senator [Last Name],

My name is Ivana Humpalot, and I am writing from California because this issue is personal and immediate for me. Evidence-based governance matters deeply to me as a legal and criminal justice professional. When I see legislation that conflates a traditional botanical supplement with lab-produced synthetic compounds, I feel obligated to speak up, because the legal distinction here is not a minor one.

Natural kratom products have supported my daily well-being in ways I value and have chosen deliberately as a responsible adult. That right to choose a botanical supplement should not be eliminated by legislation that does not distinguish between what is natural and what is manufactured in a lab.

Here is what troubles me about how this bill is currently drafted: HB 328 appears to sweep natural kratom into scheduling language without meaningfully separating it from synthetic alkaloid products. Those are fundamentally different things. A natural kratom leaf contains its compounds in balance, which is part of why the plain leaf has such a different profile. Once you isolate or synthetically emphasize one compound, especially something as strong as 7-OH, you are dealing with a different product entirely. Concentrated synthetic 7-OH found in gas station tablets and candies poses risks that simply do not apply to natural kratom products consumed responsibly.

A workable regulatory solution exists. Kratom Consumer Protection Act-style safeguards, including age restrictions, accurate labeling, purity testing, and prohibition of synthetic 7-hydroxymitragynine in consumer products, give legislators meaningful tools without banning the leaf outright. Prohibition removes accountability. Regulation creates it.

Your constituents who use natural kratom products deserve a policy framework built on the actual

evidence, not one that treats a traditional botanical the same as a concentrated synthetic alkaloid. The difference is real, it is chemical, and it is legally significant. A legal professional asking you to see that distinction is not a minor ask.

Natural kratom and concentrated synthetic 7-OH are not interchangeable products, and they should not be treated that way under the law. Please build a framework that protects consumers from dangerous products while respecting responsible adult use of the traditional leaf.

Respectfully,  
Ivana Humpalot  
California

## KCAC Advocacy Buddy — North Carolina

Advocate: Rick O'Shea | Generated: 6/30/2026

---

Dear Senator [Last Name],

Here is the straightforward ask: oppose the blanket ban language in HB 328 and replace it with common-sense consumer protections that actually target the dangerous products. As a constituent and natural kratom consumer, I believe you deserve to hear an honest account of how this bill would affect real people who rely on natural kratom products responsibly every day.

Natural kratom has supported my steady energy and focus, helped me maintain a calmer mindset, and supported everyday comfort in ways that genuinely matter to my quality of life. That is not a small thing. Losing access to a botanical supplement that works would be a serious setback, not just an inconvenience.

A broad prohibition would not only affect me. It would remove a legal, natural botanical product from thousands of responsible adults across North Carolina who have done nothing wrong. No regulatory framework, no age restrictions, no lab testing requirements - just a ban. That is a blunt instrument applied to a nuanced problem.

I want to be straightforward about something important: the real concern is not natural kratom leaf. It is the synthetic and concentrated alkaloid products appearing in convenience stores and gas stations. The plain leaf should not be made to carry the burden of a problem it did not create. Synthetic 7-OH appears to be the source of the major concern, and that is where any serious regulatory attention ought to begin.

There is a better path. A Kratom Consumer Protection Act-style framework would mandate lab testing, require accurate labeling, set age minimums, and ban harmful additives - including concentrated synthetic 7-OH. That approach addresses the genuine public safety issue without wiping out access to natural kratom products for responsible consumers.

Good legislation draws clear lines between what is actually causing harm and what is not. A ban that sweeps in both the problem product and the safe one is not precision - it is an overcorrection that North Carolina's kratom consumers will feel directly.

Please consider amending this legislation so it targets concentrated synthetic 7-OH products and establishes clear guardrails for the industry, rather than prohibiting natural kratom leaf altogether.

Respectfully,  
Rick O'Shea  
California

## KCAC Advocacy Buddy — North Carolina

Advocate: Moe Lester | Generated: 6/30/2026

---

Dear Senator [Last Name],

I do not write to legislators often, but as a North Carolina-adjacent consumer watching HB 328 move forward, this felt important enough to speak up about. As a longtime consumer of natural kratom products, I want to be straightforward: this bill gets it wrong in a way that will hurt real people without actually solving the problem it claims to address.

The core issue is proportionality. HB 328 sweeps natural botanical products into scheduling language designed for dangerous synthetic compounds, and that is simply not a fair or accurate match. Natural kratom products, used responsibly by adults for years, are not the same thing as lab-produced synthetic 7-OH showing up in gas station candy and tablets. Those concentrated synthetic products are genuinely concerning. Banning the leaf because of what a chemist can extract in a lab is like banning grapes because someone can distill grain alcohol. The comparison does not hold up.

What I wish more legislators understood about this issue is that the distinction between natural kratom and synthetic 7-hydroxymitragynine is not a technicality - it is the entire ballpark. Concentrated 7-OH is engineered for intensity. Natural kratom leaf products contain only trace, non-quantifiable amounts of 7-OH as part of their natural botanical profile. These are categorically different things, and good policy should treat them that way.

Other states have already figured this out. Consumer protection frameworks modeled on the Kratom Consumer Protection Act address labeling, age restrictions, and product safety without banning the botanical supplement outright. That is the smarter path. FDA Commissioner Martin Makary said it as clearly as anyone could when he stated, "We are not targeting the kratom leaf." When the top federal health official is that direct, states should pay attention before passing laws that go beyond what federal officials themselves are saying.

North Carolina can still get this right, and I believe you will.

Responsible policy should recognize that natural kratom leaf is different from highly concentrated synthetic products designed for stronger effects. Please protect the public by regulating the high-risk products rather than sweeping natural kratom into the same category.

Sincerely,  
Moe Lester  
California

## KCAC Advocacy Buddy — North Carolina

Advocate: Hugh Jass | Generated: 6/30/2026

---

Dear Senator [Last Name],

Thank you for taking a moment to read this. I know your inbox is full, and I don't take that lightly.

Natural kratom has been part of my daily routine, and what I've experienced has been genuinely positive. Supported steady energy, a calmer mindset, and a steadier sense of wellbeing. Nothing dramatic. Just better days. That matters more than I can fully put into words, and the thought of losing access to a botanical supplement I've relied on responsibly is deeply troubling.

From California, I am writing to ask for policy that targets real harms without sweeping up responsible consumers. I work in addiction treatment. I see people every day navigating hard choices about what to put in their bodies, and I've come to believe that honest, evidence-based policy matters far more than reactive legislation. HB 328, as written, would eliminate access to natural kratom products for people like me - people who use them carefully and intentionally. That outcome concerns me deeply.

If 7-OH is the thing raising the strongest concerns, then honesty requires us to say that directly. It is not fair, accurate, or scientific to take those concerns and then project them onto the natural kratom leaf.

The products driving safety concerns tend to be synthetic 7-hydroxymitragynine - lab-produced, highly concentrated, and sold in candies and tablets at gas stations. That is a legitimate problem worth addressing. But natural kratom products are something else entirely. Treating them as identical isn't just imprecise - it would harm thousands of responsible consumers while doing nothing to stop the products that actually warrant scrutiny.

If you look at how other states have successfully handled this, the answer hasn't been prohibition. It's

been consumer protection frameworks - age restrictions, labeling requirements, and purity standards that give people real information and hold bad actors accountable. North Carolina could lead on that.

This issue calls for precision, not panic. If lawmakers are concerned about synthetic 7-OH, then those products should be the target, while natural kratom should be handled through a consumer-protection model that promotes transparency and accountability.

Respectfully,

Hugh Jass

California

## KCAC Advocacy Buddy — North Carolina

Advocate: Ben Dover | Generated: 6/30/2026

---

Dear Senator [Last Name],

Thirty years of public service teach you to look past the headline and ask what the data actually shows. As a law enforcement officer and registered voter, I have a personal stake in how this legislation is written - and what I see in HB 328 troubles me.

Natural kratom products have supported a calmer mindset and steadier energy during demanding shifts. My story answers are still being worked out in exact detail, but the core truth is straightforward: this botanical supplement has been a meaningful part of maintaining everyday comfort and focus, without impairing judgment or performance on the job. That matters in my line of work.

Looking at the evidence objectively, one thing becomes very clear: not all products carrying the kratom label are the same. What is sold as a natural botanical product in capsule or powder form is categorically different from synthetic 7-OH formulations found in convenience store candies and tablets. The stronger the product becomes, the more important it is to separate it from the leaf it came from. Synthetic 7-OH products are not just stronger versions of kratom leaf; they represent a meaningful shift that deserves separate treatment. Lumping them together under a single prohibition does not reflect the science, and it penalizes responsible adults who use natural kratom products appropriately.

States that have moved forward with consumer-protection frameworks have shown a smarter path: set clear labeling standards, restrict synthetic concentrated 7-OH formulations, and require age verification. That kind of targeted regulation protects the public without eliminating access to a natural botanical product that many North Carolinians rely on daily. It is the same logic we apply in law enforcement - address the actual threat, not everyone nearby.

Please consider how many ordinary people would be harmed by a broad ban on natural kratom. A more balanced and effective response would be to regulate the industry, cap dangerous synthetic formulations, and enforce clear product standards.

Respectfully,

Ben Dover

California

## KCAC Advocacy Buddy — North Carolina

Advocate: PERSONAL STORY: Dddddf BAN IMPACT: Dddddd NATURAL VS. SYNTHETIC: Dddddd REGULATORY  
ASK: Dddddd | Generated: 6/30/2026

---

Dear Senator [Last Name],

What I would lose matters less than why I am writing. As a student and young professional, I am reaching out as a voter in California because I believe this bill can be improved before it harms the wrong people. The decision North Carolina makes here will affect real constituents who have made thoughtful, responsible choices about their own wellness.

Natural kratom products have become a quiet, steady part of my routine. Nothing dramatic, nothing extreme. Simply a botanical supplement that has supported steady energy and focus on long study days, and supported winding down when my mind needed to settle. That kind of consistency matters when you are building a career and managing the pressures that come with it.

A blanket ban would take that away. Not from manufacturers or bad actors, but from everyday people who have never caused harm to anyone. The burden falls on the wrong shoulders entirely.

From a purely practical standpoint, the concern driving this legislation appears to be the rise of synthetic alkaloid products found in gas stations and convenience stores. That concern is legitimate. But the response should be precise, not broad.

The simplest way to put it is this: natural kratom leaf is not the same as concentrated synthetic 7-OH. One is a traditional plant used by millions, and the other is a far stronger product now driving much of the public concern.

Your constituents deserve policy that sees that distinction clearly. Writing a law that treats a traditional botanical supplement the same as a lab-engineered synthetic compound is not careful legislating. It is the kind of error that erodes public trust in the regulatory process itself. You have the opportunity to write something better.

The issue we are facing isn't responsible adults safely using natural kratom leaf. The market has been flooded with dangerous, highly concentrated synthetic 7-OH products that cause severe highs and addiction. Those synthetics bear no resemblance to natural kratom. Please adopt a Kratom Consumer Protection Act, just like 20 other states have done. We can cap the 7-oh percentage and regulate the industry rather than enacting a blanket ban.

[Your Name]

[Your City, State]

## KCAC Advocacy Buddy — North Carolina

Advocate: Oliver Butts | Generated: 6/30/2026

---

Dear Senator [Last Name],

My name is Oliver Butts, and I am writing to you as a business owner who relies on natural kratom products to support my daily functioning. I have voted in Colorado for over a decade, and I want you to know that this issue weighs heavily on my mind, even as someone following North Carolina's HB 328 from outside your state. Responsible kratom consumers are watching this closely, and what North Carolina decides will matter.

The ask is straightforward: please oppose the scheduling language in HB 328 that would ban natural kratom leaf, and consider adopting KCPA-style consumer protection standards instead. Running a business means staying sharp, managing stress, and showing up consistently. Natural kratom products have supported steady energy, a calmer mindset, and the kind of daily groundedness that lets me do that reliably.

As someone who lives with this every day, I can tell you the reality is quite different from the headlines. The products causing genuine public concern are not traditional kratom leaf. They are synthetic 7-OH tablets, candies, and gas station novelty items that bear little resemblance to what responsible consumers like me actually use. Concentrated synthetic 7-OH is a lab-produced product that exists in quantities never found in nature. Treating natural kratom the same way under HB 328 conflates two very different things.

There is no reason to choose between consumer protection and consumer freedom when you can have both. You can target synthetic 7-OH products that raise the most concern while still preserving adult access to natural kratom leaf.

Reasonable standards, things like purity testing, proper labeling, and age verification, give regulators real tools without removing safe choices from people who use them responsibly. That is a policy that

actually works.

A blanket ban would punish ordinary people who are using natural kratom responsibly. Please consider a Kratom Consumer Protection Act approach instead of criminalizing consumers over a problem tied to synthetic 7-OH.

Respectfully,

Oliver Butts

Colorado

## KCAC Advocacy Buddy — North Carolina

Advocate: Oliver Klozoff | Generated: 6/30/2026

---

Dear Senator [Last Name],

HB 328 is moving in the wrong direction. My name is Oliver Klozoff, and as a private dancer and constituent writing from California, I am sharing a perspective I hope you will take seriously before this bill advances further.

My work is physically demanding. Maintaining steady energy, supporting everyday comfort after long rehearsals, and keeping a clear head are not optional - they are requirements of my livelihood. Natural kratom products have supported all of that in a practical, consistent way. This is not a casual preference. It is part of how I function at a professional level day after day.

Losing access would not be a minor inconvenience. It would mean looking elsewhere for support, and the alternatives available in unregulated markets or through pharmaceutical channels carry risks I am not willing to accept. That is not a hypothetical concern. It is the straightforward reality for adults who rely on natural botanical supplements and would be left scrambling if a blanket ban took effect.

I want to address a misconception that I think is driving this bill in the wrong direction: the assumption that all kratom products are the same. They are not. Synthetic 7-hydroxymitragynine, manufactured in labs and found in gas station tablets and candies, is a genuinely different product from natural kratom. The more you look into it, the more obvious the distinction becomes. Natural kratom leaf has a very different history, risk profile, and public discussion than the concentrated 7-OH products that are driving the latest controversy.

North Carolina does not need a ban. It needs a regulatory framework - one that sets age restrictions, requires accurate labeling, and establishes product standards. A Kratom Consumer Protection Act approach targets the actual problem without stripping responsible adults of a botanical supplement they depend on.

Protecting public health and preserving responsible adult access are not mutually exclusive goals. I urge you to support a regulatory approach that addresses synthetic 7-OH, holds bad actors accountable, and avoids banning natural kratom.

Respectfully,

Oliver Klozoff

Dear Senator/Representative,

If SB 262 passes, responsible adults in Delaware lose access to a natural botanical supplement overnight. No warnings, no alternatives, no transition. That is the real-world consequence of this bill, and it is why I am writing today as a parent in North Carolina who follows legislation closely and wants my voice included in this process.

As a parent and guardian, I think carefully about what I bring into my life. Supporting steady energy, a calmer mindset, and general daily comfort matters when you have people depending on you. Natural kratom products have become a quiet, considered part of my routine. Nothing dramatic. Just a botanical supplement that works for me and that I choose as a responsible adult.

A blanket scheduling ban does not account for that. It sweeps up natural kratom alongside genuinely problematic products without drawing any meaningful line. If there is one takeaway I hope you walk away with, it is this: synthetic 7-hydroxymitragynine, the kind found in gas station gummies and tablets, is not the same thing as plain leaf kratom. Concentrated synthetic 7-OH is a lab-produced product that bears little resemblance to what responsible consumers actually use. Treating them as identical is like banning herbal tea because someone spiked a drink.

In 2025, RFK, HHS, and the FDA all stood together and made the federal position clear. Natural kratom was not the thing they were aiming at, which is why states should be slow to take drastic action against plain leaf products.

HB 332 is the right answer here. It draws exactly the distinction that matters: regulate what is dangerous, protect what is not. That is common sense, and it is the kind of approach a parent can stand behind.

I urge you to follow the lead of states that have adopted regulatory safeguards instead of bans. Those frameworks provide a practical model for consumer protection while maintaining access to natural kratom for responsible adults.
